Food Waste Management Solution for Professional Kitchens:

Close the loop by recycling food waste into renewable energy.

BIOMASTER® 4 PLUS by MEIKO | Food waste feeding station

Food waste is a source of energy that's far too valuable to simply throw away! The BioMaster by MEIKO is the simple-yet-powerful unit needed to unlock its potential.

Ideal for medium to large professional kitchens, this machine offers a hassle-free way to deal with food waste, transforming it into recyclable biomass in less than 90 seconds.

Open the lid, tip in the organic waste, close, and press the START button — this system eliminates manual tote handling, optimizes hygiene and ergonomics in the kitchen, and lowers food waste management costs.

WALKER GREASE TRAP SERVICES | Organics collection, transportation, and processing

Walker Grease Trap Services is an industry leader in organic waste collection and management solutions for food service operations nationwide.

Walker vacuum trucks not only take care of FOG material, they can also collect liquid food waste in the same pickup. That means less trips, lower CO₂ emissions, and worry-free disposal of organic waste material.

Long-term relationships with anaerobic digestion plants close the loop, meaning zero waste and clean energy.
